Index

A

Adams-Bashforth-Moulton Predictor-Corrector 136
Analysis of variance 220, 245
design matrix for 243
for one factor 242
Anti-correlation: meaning of 239
Approximation norm 174
Arithmetic mean 222
Associativity defined 3
Average 211
Axial vectors 11

B

Babbitt 1
Back substitution 30
Bairstow's method for polynomials 62
Bell-shaped curve and the normal curve …… 209
Binomial coefficient ……...99, 204
Binomial distribution function 204, 207
Binomial series 204
Binomial theorem 205
Bivariant distribution 219
Blocked data and experiment design…… 272
Bodewig 40
Bose-Einstein distribution function 210
Boundary value problem 122
a sample solution 140
compared to an initial value problem 145
defined 139
Bulirsch-Stoer method 136

C

Cantor, G. 3
Cartesian coordinates 8, 12
Causal relationship and correlation 239, 240
Central difference operator
defined 99
Characteristic equation 49
of a matrix 49
Characteristic values 49
of a matrix 49
Characteristic vectors 49
of a matrix 49
Chebyschev polynomials 90
of the first kind 91
of the second kind 91
recurrence relation 91
relations between first and second kind 91
Chebyshev norm
and least squares 190
defined 186
Chi square
defined 227
distribution and analysis of variance . 244
normalized 227
statistic for large N 230
Chi-square test
confidence limits for 232
defined 232
meaning of 232
Cofactor of a matrix 28
Combination
defined 204
Communitative law 3
Complimentary error function 233
Confidence level
defined 231
and percentiles 232
for correlation coefficients 241, 242
for the F-test 234
Confounded interactions
defined 250
Constants of integration for ordinary differential equations 122
Contravariant vector……..... …… 16
Convergence of Gauss-Seidel iteration 47
Convergent iterative function
criterion for 46

Coordinate transformation 8
Corrector
Adams-Moulton 136
Correlation coefficient
and causality 241
and covariance 242
and least squares 242
defined 239
for many variables..... 241
for the parent population..... 241
meaning of 239, 240
symmetry of 242
Covariance 219
and the correlation coefficient 241
coefficient of..... 219
of a symmetric function 220
Covariant vectors
definition..... 17
Cramer's rule 28
Cross Product..... 11
Crout Method..... 34
example of..... 35
Cubic splines
constraints for 75
Cumulative probability and KS tests 235
Cumulative probability distribution
of the parent population 235
Curl 19
definition of..... 19
Curve fitting
defined 64
with splines 75

D

Degree
of a partial differential equation..... 146
of an ordinary differential equation .. 121
Degree of precision
defined 102
for Gaussian quadrature 106
for Simpson's rule 104
for the Trapezoid rule..... 103
Degrees of freedom
and correlation 241
defined 221
for binned data..... 236
for the F-statistic..... 230
for the F-test 233
for the t-distribution..... 227
in analysis of variance 244
Del operator 19
(see Nabula)
Derivative from Richardson extrapolation 100
Descartes's rule of signs..... 57
Design matrix
for analysis of variance..... 243
Determinant
calculation by Gauss-Jordan
Method..... 33
of a matrix..... 7
transformational invariance of…… 47
Deviation
from the mean..... 238
statistics of 237
Difference operator
definition..... 19
Differential equations
and linear 2-point boundary
value problems..... 139
Bulirsch-Stoer method..... 136
error estimate for 130
ordinary, defined..... 121
partial..... 145
solution by one-step methods 122
solution by predictor-corrector
methods..... 134
solution by Runga-Kutta method…..126
step size control 130
systems of 137
Dimensionality of a vector..... 4
Dirac delta function
as a kernel for an integral
equation 155
Directions cosines..... 9

Dirichlet conditions
for Fourier series 166
Dirichlet's theorem 166
Discrete Fourier transform 169
Distribution function
for chi-square 227
for the t-statistic 226
of the F-statistic 229
Divergence 19
definition of 19
Double-blind experiments 246

E

Effect
defined for analysis of variance 244
Eigen equation 49
of a matrix 49
Eigen-vectors 49
of a matrix 49
sample solution for 50
Eigenvalues
of a matrix 48, 49
sample solution for 50
Equal interval quadrature 112
Equations of condition
for quadrature weights 106
Error analysis
for non-linear least squares 186
Error function 232
Euler formula for complex numbers 168
Expectation value 221
defined 202
Experiment design 245
terminology for 249
using a Latin square 251
Experimental area 249
Extrapolation 77, 78

F

F-distribution function
defined 227
F-statistic 230
and analysis of variance 244
for large N 230
F-test
and least squares 234
defined 233
for an additional parameter 234
meaning of 234
Factor
in analysis of variance 242
of an experiment 249
Factored form
of a polynomial 56
Factorial design 249
Fast Fourier Transform 92, 168
Fermi-Dirac distribution function 210
Field
definition 5
scalar 5
vector 5
Finite difference calculus
fundemental theorem of 98
Finite difference operator
use for numerical differentiation 98
First-order variances
defined 237
Fixed-point
defined 46
Fixed-point iteration theory 46
and integral equations 153
and non-linear least squares 182, 186
and Picard's method 123
for the corrector in ODEs 136
Fourier analysis 164
Fourier integral 167
Fourier series 92, 160
and the discrete Fourier transform 169
coefficients for 165
convergence of 166
Fourier transform 92, 164
defined 167
for a discrete function 169
inverse of 168
Fredholm equation
defined 146
solution by iteration 153
solution of Type 1 147
solution of Type 2 148

Freedom
degrees of 221
Fundamental theorem of algebra 56

G

Galton, Sir Francis 199
Gauss, C.F. 106, 198
Gauss elimination
and tri-diagonal
equations…… 38
Gauss Jordan Elimination 30
Gauss-Chebyschev quadrature
and multi-dimension quadrature 114
Gauss-Hermite quadrature 114
Gauss-iteration scheme
example of 40
Gauss-Jordan matrix inversion
example of 32
Gauss-Laguerre quadrature 117
Gauss-Legendre quadrature 110
and multi-dimension quadrature 115
Gauss-Seidel Iteration 39
example of 40
Gaussian Elimination 29
Gaussian error curve 210
Gaussian quadrature 106
compared to other quadrature formulae 112
compared with Romberg quadrature. 111
degree of precision for 107
in multiple dimensions 113
specific example of 108
Gaussian-Chebyschev quadrature 110
Gegenbauer polynomials 91
Generating function for orthogonal polynomials 87
Gossett 233
Gradient 19
definition of 19
of the Chi-squared surface…….. 183

H

Heisenberg Uncertainty Principle 211
Hermite interpolation 72
as a basis for Gaussian quadrature…. 106
Hermite Polynomials 89
recurrence relation……..... 89
Hermitian matrix
definition 6
Higher order differential equations as systems
of first order equations……...140
Hildebrandt 33
Hollerith 1
Hotelling 40
Hotelling and Bodewig method
example of 42
Hyper-efficient quadrature formula
for one dimension 103
in multiple dimensions 115
Hypothesis testing and analysis of variance .. 245

I

Identity operator 99
Initial values for differential equations 122
Integral equations
defined 146
homogeneous and inhomogeneous ... 147
linear types 147
Integral transforms 168
Interaction effects and experimental design .. 251
Interpolation
by a polynomial 64
general theory 63
Interpolation formula as a basis for quadrature
formulae……104
Interpolative polynomial
example of 68
Inverse 3
of a Fourier Transform 168
Iterative function
convergence of 46
defined 46
multidimensional 46
Iterative Methods
and linear equations 39

J

Jacobi polynomials 91
and multi-dimension Gaussian
quadrature 114
Jacobian 113
Jenkins-Taub method for polynomials 63

K

Kernel of an integral equation.....148
and uniqueness of the solution….. …154
effect on the solution.....154
Kolmogorov-Smirnov tests.....235
Type 1 236
Type 2 236
Kronecker delta.....9, 41, 66
definition.....6
Kurtosis.....212
of a function.....213
of the normal curve.....218
of the t-distribution 226

L

Lagrange Interpolation.....64
and quadrature formulae 103
Lagrange polynomials
for equal intervals 66
relation to Gaussian quadrature……..107
specific examples of.....66
Lagrangian interpolation
and numerical differention……99
weighted form.....84
Laguerre Polynomials 88
recurrence relation 89
Laplace transform
defined 168
Latin square
defined 251
Least square coefficients
errors of.....176, 221
Least Square Norm
defined 160
Least squares
and analysis of variance.....243
and correlation
coefficients……236
and maximum likelihood 222
and regression analysis 199
and the Chebyshev norm.....190
for linear functions.....161
for non-linear problems.....181
with errors in the independent variable181
Legendre, A. 160, 198
Legendre Approximation.....160, 164
Legendre Polynomials 87
for Gaussian quadrature..... 108
recurrence relation 87
Lehmer-Schur method for polynomials..... 63
Leibnitz..... 97
Levels of confidence
defined 231
Levi-Civita Tensor..... 14
definition..... 14
Likelihood
defined 221
maximum value for..... 221
Linear correlation 236
Linear equations
formal solution for 28
Linear Programming..... 190
and the Chebyshev norm 190
Linear transformations..... 8
Logical 'or' 200
Logical 'and'..... 200

M

Macrostate 210
Main effects and experimental design……..251
Matrix
definition..... 6
factorization..... 34
Matrix inverse
improvement of..... 41
Matrix product
definition..... 6
Maximum likelihood
and analysis of variance..... 243
of a function..... 222
Maxwell-Boltzmann statistics 210
Mean 211, 212
distribution of 225
of a function..... 211, 212
of the F-statistic 230
of the normal curve..... 218
of the t-distribution 226
Mean square error
and Chi-square..... 227
statistical interpretation of……..238
Mean square residual (see mean square error)
determination of..... 179

Median
defined 214
of the normal curve 218
Microstate 210
Milne predictor..... 136
Mini-max norm 186
(see also Chebyshev norm)
Minor of a matrix 28
Mode 222
defined 213
of a function 214
of chi-square 227
of the F-statistic 230
of the normal curve 218
of the t-distribution 226
Moment of a function..... 211
Monte Carlo methods..... 115
quadrature 115
Multi-step methods for the solution of ODEs…...
……134
Multiple correlation 245
Multiple integrals 112
Multivariant distribution 219

N

Nabula 19
Natural splines 77
Neville's algorithm for polynomials..... 71
Newton, Sir I. 97
Newton-Raphson
and non-linear least squares 182
for polynomials 61
Non-linear least squares
errors for 186
Non-parametric statistical tests
(see Kolmogorov-Smirnov
tests) 236
Normal curve 209
and the t-,F-statistics 230
Normal distribution 221
and analysis of variance 245
Normal distribution function..... 209
Normal equations 161
for non-linear least squares 181
for orthogonal functions..... 164
for the errors of the coefficients..... 175
for unequally spaced data..... 165
matrix development for tensor product
……..162
for weighted..... 163
for Normal matrices
defined 7
for least squares 176
Null hypothesis 230
for correlation 240
for the K-S tests 235
Numerical differentiation..... 97
Numerical integration 100

O

Operations research 190
Operator 18
central difference 99
difference 19
differential 18
finite difference..... 98
finite difference identity…….....99
identity 19
integral 18
shift 19, 99
summation 19
vector 19
Optimization problems 199
Order
for an ordinary differential
equation 121
of a partial differential
equation…….146
of an approximation 63
of convergence..... 64
Orthogonal polynomials
and Gaussian quadrature..... 107
as basis functions for iterpolation 91
some specific forms for 90
Orthogonal unitary transformations..... 10
Orthonormal functions……..86
Orthonormal polynomials
defined 86
Orthonormal transformations..... 10, 48
Over relaxation for linear equations 46

P

Parabolic hypersurface and non-linear least squares 184
Parametric tests 235
(see t-,F-,and chi-square tests)
Parent population 217, 221, 231
and statistics 200
correlation coefficients in 239
Partial correlation 245
Partial derivative
defined 146
Partial differential equation 145
and hydrodynamics 145
classification of 146
Pauli exclusion principle 210
Pearson correlation coefficient 239
Pearson, K. 239
Percent level 232
Percentile
defined 213
for the normal curve 218
Permutation
defined 204
Personal equation 246
Photons 229
Picard's method 123
Poisson distribution 207
Polynomial
factored form for 56
general definition 55
roots of 56
Polynomial approximation 97
and interpolation theory 63
and multiple quadrature 112
and the Chebyshev norm 187
Polynomials
Chebyschev 91
for splines 76
Gegenbauer 90
Hermite 90
Jacobi 90
Lagrange 66
Laguerre 89
Legendre 87
orthonormal 86
Ultraspherical 90
Polytope 190
Power Spectra 92
Precision of a computer 25
Predictor
Adams-Bashforth 136
stability of 134
Predictor-corrector
for solution of ODEs 134
Probabilitly
definition of 199
Probability density distribution function 203
defined 203
Probable error 218
Product polynomial
defined 113
Proper values 49
of a matrix 49
Proper vectors 49
of a matrix 49
Protocol for a factorial design 251
Pseudo vectors 11
Pseudo-tensor 14
(see tensor density)
Pythagoras theorem and least squares 179

Q

Quadrature 100
and integral equations 148
for multiple integrals 112
Monte Carlo 115
Quadrature weights
determination of 105
Quartile
defined 214
upper and lower 214
Quotient polynomial 80
interpolation with 82
(see rational function) 80

R

Random variable
defined 202
moments for 212
Rational function 80
and the solution of ODEs 137
Recurrence relation
for Chebyschev polynomials 91
for Hermite polynomials 90

for Laguerre polynomials.....89
for Legendre polynomials.....87
for quotient polynomials.....81
for rational interpolative functions.....81
Recursive formula for Lagrangian polynomials68
Reflection transformation 10
Regression analysis.....217, 220, 236
and least squares 199
Regression line.....237
degrees of freedom for.....241
Relaxation Methods
for linear equations 43
Relaxation parameter
defined 44
example of.....44
Residual error
in least squares.....176
Richardson extrapolation 99
or Romberg quadrature 111
Right hand rule.....11
Romberg quadrature.....111
compared to other formulae…….. 112
including Richardson extrapolation....112
Roots of a polynomial.....56
Rotation matrices 12
Rotational Transformation 11
Roundoff error 25
Rule of signs 57
Runga-Kutta algorithm for systems of ODEs 138
Runga-Kutta method.....126
applied to boundary value problems.141

S

Sample set and probability theory……..200
Sample space.....200
Scalar product
definition.....5
Secant iteration scheme for polynomials 63
Self-adjoint.....6
Shift operator 99
Significance
level of 230
meaning of 230
of a correlation coefficient.....240
Similarity transformation..... 48
definition of 50
Simplex method..... 190
Simpson's rule
and Runga-Kutta..... 143
as a hyper-efficient quadrature formula…….104
compared to other quadrature ..... formulae..... 112
degree of precision for..... 104
derived..... 104
running form of..... 105
Singular matrices 33
Skewness 212
of a function..... 212
of chi-square 227
of the normal curve..... 218
of the t-distribution 226
Splines 75
specific example of..... 77
Standard deviation
and the correlation coefficient 239
defined..... 212
of the mean 225
of the normal curve..... 218
Standard error of estimate..... 218
Statistics
Bose-Einstein..... 210
Fermi-Dirac 211
Maxwell-Boltzmann 210
Steepest descent for non-linear least squares. 184
Step size
control of for ODE..... 130
Sterling's formula for factorials 207
Students's t-Test..... 233
(see t-test)
Symmetric matrix 6
Synthetic Division 57
recurrence relations for..... 58

T

t-statistic
defined..... 225
for large N..... 230

t-test
defined 231
for correlation coefficients 242
for large N 231
Taylor series
and non-linear least squares 183
and Richardson extrapolation 99
and Runga-Kutta method 126
Tensor densities 14
Tensor product
for least square normal equations 162
Topology 7
Trace
of a matrix 6
transformational invarience of 49
Transformation- rotational 11
Transpose of the matrix 10
Trapezoid rule 102
and Runge-Kutta 143
compared to other quadrature formulae 112
general form 111
Treatment and experimental design 249
Treatment level
for an experiment 249
Tri-diagonal equations 38
for cubic splines 77
Trials
and experimantal design 252
symbology for 252
Triangular matrices
for factorization 34
Triangular system
of linear equations 30

Trigonometric functions
orthogonality of 92
Truncation error 26
estimate and reduction for ODE 131
estimate for differential equations 130
for numerical differentiation 99

U

Unit matrix 41
Unitary matrix 6

V

Vandermode determinant 65
Variance 211, 212, 220
analysis of 242
for a single observation 227
of the t-distribution 226
of a function 212
of a single observation 220
of chi-square 227
of the normal curve 218
of the F-statistic 230
of the mean 220, 225
Variances
and Chi-squared 227
first order 238
of deviations from the mean 238
Vector operators 19
Vector product
definition 6
Vector space
for least squares 179
Vectors
contravariant 16
Venn diagram for combined probability 202
Volterra equations
as Fredholm equations 150
defined 146
solution by iteration 153
solution of Type 1 150
solution of Type 2 150

W

Weight function 86
for Chebyschev polynomials 90
for Gaussian quadrature 109
for Gegenbauer polynomials 90
for Hermite polynomials 89
for Laguerre polynomials 88
for Legendre polynomials 87
Jacobi polynomials 90
Weights for Gaussian quadrature 108

Y

Yield for an experiment 249

Z

Zeno's Paradox 197
